SPECIAL ISSUE
ELEMENTS OF MATHEMATICAL PHENOMENOLOGY AND
PHENOMENOLOGICAL MAPPING IN NON-LINEAR DYNAMICS

Guest Editors
Katica R. (Stevanović) Hedrih, Ivan Kosenko, Pavel Krasilnikov and Pol D. Spanos
Preface

This Special Issue of IJNM, *A Phenomenological Conspectus on Nonlinear Dynamics*, emphasizes the notion that various and different physical phenomena can often be described by identical or similar mathematical instruments. In this regard, papers from disparate fields have been compiled in the issue.

It is noted that the concepts of Mathematical Phenomenology and Phenomenological Mappings are captured in the works of Professor Mihailo Petrović (1868–1943), a Serbian mathematician who was one of the doctoral students of Jules Henri Poincaré (1854–1912). The specific title of his book in French is *Mecanismes communs aux phénomènes disparates*, Paris 1921. In this book, Petrović studied (among others) certain elements of multi-dimensional geometry, couplings between mechanisms and manifestations of phenomena, quantitative vis-à-vis qualitative images of appearances (phenomena), as well as different kinds of analogies.

It is hoped that this Special Issue comprising papers of different thematic foci will serve to highlight the role of a “phenomenological” perspective for pedagogical and investigative purposes in the field of nonlinear dynamics in physically disparate systems.

CONTENTS

1 Preface

2 Discrete fractional order system vibrations

12 Stability of an equilibrium position of a pendulum with step parameters

18 Structural analogies on systems of deformable bodies coupled with nonlinear layers

25 Autocatalator as the source of instability in the complex non-linear neuroendocrine model

31 Elements of mathematical phenomenology of self-organization nonlinear dynamical systems: Synergetics and fractional calculus approach

43 Fast non-resonance rotations of spacecraft in restricted three body problem with magnetic torques

51 Differential equations for librational motion of gravity-oriented rigid body

58 Secular perturbations of quasi-elliptic orbits in the restricted three-body problem with variable masses

64 Stability of triangular libration points in a planar restricted elliptic three body problem in cases of double resonances

69 Rayleigh–Bénard convection instability in the presence of spatial temperature modulation on both plates

75 Generaleristics of unsteady MHD temperature boundary layer

(Continued on inside back cover)
V.S. Aslanov
D. Milosavljevic, G. Bogdanovic, L. Veljovic, A. Radakovic and M. Lazic
L. Veljovic, A. Radakovic, D. Milosavljevic and G. Bogdanovic
D.N. Zekovic
I. Atanasovska
I. Grozdanovic, K. Todorovic, N. Vasovic, N. Burić and N. Trisovic

85  Chaotic behavior of a body in a resistant medium
94  Wave propagation in layer with two preferred directions
100 Rigid body coupled rotation around no intersecting axes
108 Energy integrals for mechanical systems with nonlinear nonholonomic constraints
114 The mathematical phenomenological mapping in non-linear dynamics of spur gear pair and radial ball bearing due to the variable stiffness
121 Interplay between internal delays and coherent oscillations in delayed coupled noisy excitable systems
