Dear Prof. Katica R. (StevanoviÄ‡) Hedrih,

we are pleased to inform you that you were selected as moderator / chair
of the following 2 session(s):

Session "Nonlinear Dynamics of Structural and Machine Elements VI"
==========
Time : Thursday, 10/Jul/2014: 10:30am - 12:10pm
Location: HS5
Session Chair: K Nakano; knakano@iis.u-tokyo.ac.jp
Session Chair: Katica R. (StevanoviÄ‡) Hedrih; khedrih@sbb.rs
http://osiris.tuwien.ac.at/enoc/sessions.php?form_session=7

Presentations

Enhancing vibrational energy harvesting using stochastic resonance within
a bi-stable mechanical system
Author(s): Nakano, Kimihiko; Cartmell, Matthew P; Rencheng, Zheng; Hu,
Honggang; Su, Dongxu
Presenting Author: Nakano, Kimihiko; knakano@iis.u-tokyo.ac.jp

PetroviÄ‹â€™s theory of elements of mathematical phenomenology and
phenomenological mapping applied to system nonlinear dynamics
Author(s): Hedrih, Katica {Stevanovic}; Hedrih, Andjelka N
Presenting Author: Hedrih, Andjelka N; handjelka@hm.co.rs

Modelling of parametric resonance oscillations by two coupled modes
Author(s): Krasnopolskaya, Tatiana; Spektor, Viacheslav; Prykhodko,
Dmytro; Gourjii, Alexandre

Presenting Author: Krasnopolskaya, Tatiana; t.krasnopolskaya@tue.nl

Nonlinear normal modes of vibrating mechanical systems and their applications
Author(s): Mikhlin, Yuri Vladimirovich; Avramov, Konstantin; Pierre, Christophe
Presenting Author: Mikhlin, Yuri Vladimirovich; Yuri_Mikhlin@mail.ru

Session "General Track V"

==========

Time : Friday, 11/Jul/2014: 10:30am - 12:10pm
Location: HS6
Session Chair: Katica R. (StevanoviÄ‡) Hedrih; khedrih@sbb.rs
Session Chair: Yuri V. Mikhlin; Yuri_Mikhlin@mail.ru
http://osiris.tuwien.ac.at/enoc/sessions.php?form_session=24

Presentations

Moving-load-induced vibration of a multibody beam composed of elastic and rigid beam segments
Author(s): Wu, Jia-Jang
Presenting Author: Wu, Jia-Jang; jjangwu@mail.nkmu.edu.tw

Elements of mathematical phenomenology and qualitative /mathematical analogies on the basis of generalized Lissajous curves
Author(s): Hedrih, Katica R. {StevanoviÄ‡}; Ju SimonoviÄ‡, Julijana; IvanoviÄ‡-Å aÅ¡iÄ‡, Ana; Kolar-AniÄ‡, Ljiljana; ÄŒupiÄ‡, Å½eljko; Hedrih, Andjelka N.
Presenting Author: Hedrih, Katica R. {StevanoviÄ‡}; khedrih@sbb.rs

Chaotic dynamics in an Earth pointing, magnetically controlled spacecraft
Author(s): Della Rossa, Fabio; Dercole, Fabio; Lovera, Marco
Presenting Author: Della Rossa, Fabio; fabio.dellarossa@polimi.it

Nonlinear vibration of nonlocal Kelvin-Voigt viscoelastic nanobeam embedded in elastic medium
Author(s): KarliÄ iÄ‡, Danilo Z.; CajiÄ‡, Milan S.; StamenkoviÄ‡, Marija
Presenting Author: KarliÄ iÄ‡, Danilo Z.; danilozmaj@gmail.com

Intermittencies in Bray-Liebhafsky reaction system
Author(s): Bubanja, Itana NuÅ¡a; AniÄ‡, Slobodan; MilenkoviÄ‡, Maja; ÄŒupiÄ‡, Å½eljko; Kolar-AniÄ‡, Ljiljana
Presenting Author: Bubanja, Itana NuÅ¡a; itana.bubanja@ffh.bg.ac.rs

Please contact the speakers in your session to inform them about the schedule of the session and their presentation times. Please remember to spare time for questions and for discussion on the session topic with the

attendees.

We have assigned presentation slots of 20 minutes for each speaker, which should ideally consist of 15 minutes talk and 5 minutes discussion. A few presentations are "plenary talks" with 40 minutes presentation time.

In order to make the switching between sessions easy, we kindly ask you to keep the order of presentations and not to fill up withdrawn sessions.

If for some reason you cannot act as chair in a session, please inform us as soon as possible.
Thank you again for your collaboration to the success of the congress.

Horst Ecker, Alois Steindl, and Stefan Jakubek
Your organizers of ENOC2014.

Dear Prof. Katica R. (Stevanović) Hedrih,

we would like to ask you to chair a session for the General Track at the conference.
We have already assigned you tentatively as chair of a session. The preliminary program schedule can be viewed at http://osiris.tuwien.ac.at/enoc/sessions.php.

If you are not able to chair the session(s), please let us know as soon as possible.

Your contribution to the successful accomplishment of the conference is highly appreciated!

With kind regards
Alois Steindl and Horst Ecker

Dear Prof. Katica R. (Stevanović) Hedrih,

since Profs. Mikhlin and Cartmell nominated you as possible chair for the sessions
of MS-09 on "Nonlinear Dynamics of Structural and Machine Elements", we have preliminarly assigned you as session chair and ask you kindly, to take responsibility for these sessions. The preliminary program schedule can be viewed at
http://osiris.tuwien.ac.at/enoc/sessions.php.

If you are not able to chair the session(s), please let us know as soon as possible!

With kind regards
Alois Steindl and Horst Ecker

Enhancing vibrational energy harvesting using stochastic resonance within a bi-stable mechanical system

Kimihiko Nakano[1], Matthew P Cartmell[2], Zheng Rencheng[1], Honggang Hu[1], Dongxu Su[1]
[1]The University of Tokyo, Japan; [2]University of Sheffield

Stochastic resonance is a physical phenomenon where large vibrations can occur when a weak sinusoidal modulating force is applied to a noise-excited bi-stable system, for a specific Kramers rate. It has been shown that such systems can effectively enhance the level of harvestable energy from ambient random vibration. In this paper it is shown by experiments that stochastic resonance can be initiated in a practical test system and that the power generated by a piezoelectric actuator can be measured. It is shown that in this specific test system the harvester actuator can generate power of 1.2 W while the system itself consumes 0.6 W in order to produce the periodic force to generate the necessary stochastic resonance, thus leading to a harvestable power of 0.6 W.

Petrović's theory of elements of mathematical phenomenology and phenomenological mapping applied to system nonlinear dynamics

Katica {Stevanovic} Hedrih[1], Andjelka N Hedrih[2]
[1]Mathematical Institute SANU, Belgrade, Faculty of Mechanical Engineering University of Nis, Nis, Serbia; [2]State University of Novi Pazar, Serbia

Using Mihailo Petrović's theory of mathematical phenomenology elements, phenomenological mapping in non-linear dynamics, linear and non-linear vibrations, signals, main and parametric resonance and dynamical absorptions, resonant jumps, trigger of coupled singularities, trigger of one side singularities, in global and local models of system dynamics – abstractions of different real system local and global dynamics are identified and presented.

Our results showed that Petrović's theory of elements of mathematical phenomenology is suitable for integration of knowledge in different areas of non-linear dynamics and useful for reductions of models of non-linear dynamics containing complexity of non-linear phenomena – regular, chaotic and stochastic regimes to explain non-linear dynamics of different physical, chemical or biological natures as well as social dynamics properties.

Results are also applicable to different systems with multiple deformable bodies with eleven degrees of freedom: chains, beams, plates, twisted chains, pendulums, and electrical chains and for biological oscillators.

Modelling of parametric resonance oscillations by two coupled modes

Tatiana Krasnopolskaya[1], Viacheslav Spektor[1], Dmytro Prykhodko[2], Alexandre Gourjii[3]
[1]National Academy of Science of Ukraine, Ukraine; [2]Taras Shevchenko National University of Kyiv; [3]National Technical university of Ukraine "KPI"

Two new mathematical models of parametric oscillations of two different continuous systems are worked out. The first system corresponds to a cantilever bar vibrations with low bending rigidity and the second system to cross-waves at fluid free-surface in a volume between two cylinders of finite length. In the cases of internal resonances parametric oscillations of continuous systems are approximated by two eigenmodes with different eigenfrequencies. On the basis of analysis of the largest Lyapunov exponents for a complex system three types of steady-state regimes are found: periodic, quasi-periodic and chaotic regimes. Phase portraits and power spectra are constructed and studied. The existence of chaotic attractors was established for the dynamical system presenting cross-waves and forced waves interaction at fluid free-surface in a volume between two cylinders of finite length. For averaged symmetric systems describing two parametric eigenmodes of a flexible cantilever bar with very low bending rigidity no chaotic regimes were found. Quasi-periodic and periodic regimes are typical for this dynamical system which has a symmetry with respect to unknown variables.

Nonlinear normal modes of vibrating mechanical systems and their applications

Yuri Vladimirovich Mikhlin[1], Konstantin Avramov[2], Christophe Pierre[3]
[1]National Technical University "Kharkov Polytechnic Institute", Ukraine; [2]National Academy of Sciences of Ukraine; [3]University of Illinois at Urbana-Champaign

Nonlinear normal modes (NNMs) are periodic motions of specific type, which can be observed in different nonlinear mechanical systems. In the normal vibration mode a finite degree-of-freedom system vibrates like a single-degree-of-freedom conservative one. Significance of NNMs for mechanical engineering is determined by important properties of these motions.

Kauderer was the first, who developed quantitative methods for the NNMs analysis in two-DOF conservative nonlinear systems. Rosenberg considered n-DOF conservative systems and deduced the first definition of NNM. The NNMs based on determination of modal lines in configuration space, can be called the Kauderer-Rosenberg nonlinear normal modes. Shaw and Pierre developed an alternative concept of NNMs for nonlinear dissipative finite-DOF systems. Their researches are based on the computation of invariant manifolds of motion in phase space. This second type of the NNMs is called the Shaw-Pierre nonlinear normal modes.

Generalization of the NNMs concepts to forced, self-exited and parametric vibrations is possible; a generalization of the NNMs to continuous systems is made.

NNMs have been used to solve applied problems of mechanical and aerospace engineering. The Kauderer- Rosenberg NNMs are applied for analysis of large amplitude dynamics of finite-DOF nonlinear mechanical systems, such as systems with nonlinear absorbers; cylindrical shells with geometrical nonlinearity; cylindrical shells interacting with a fluid; shallow arches snap-through motions et al.

The Shaw-Pierre NNMs are applied to analyze dynamics of pre-twisted beam with geometrical nonlinearity; beam parametric vibrations; nonlinear vibrations of shallow shells with complex base; nonlinear vibrations of the vehicle suspension; nonlinear dynamics of the one-disk rotor in two bearings.

PHYSICAL CHEMISTRY 2014

12th International Conference on Fundamental and Applied Aspects of Physical Chemistry

BELGRADE
22-26 September 2014

Physical Chemistry 2014, Belgrade, September 22-26, 2014

Invited Sectional Lecture:

Katica R. (Stevanović) Hedrih **, METHOD OF NONLINEAR DYNAMICS: PHENOMENOLOGICAL APPROXIMATE MAPINGS**

ABSTRACT: Phenomenological approximate mapping as an universal method of nonlinear dynamics is presented. The basic idea given by Mihailo Petrović and elaborated in his two books entitled: *Elements of mathematical phenomenology and Phenomenological mappings* is applied here on one physicochemical reaction system and a mechanical system. In particular, in both nonlinear systems the local dynamic nonlinear phenomena around stationary states are analyzed by the phenomenological approximate mappings. A general table with phenomenological linear and nonlinear approximate mappings around singular states is presented.
KEYWORDS: Nonlinear dynamics, phenomenological approximate mappings, stationary states, trigger of coupled singularities, linear approximation, nonlinear approximation, analogy.

In the honor of Professor Bogoljub Stankovic on the occasion of his 90th birthday

ABSTRACT:

1* Using discrete continuum method, fractional order signals analysis in hybrid system dynamics [3] is presented. For a class of fractional order system dynamics with finite number of degrees of freedom, independent eigen main fractional order modes are determined with corresponding eigen main coordinate of the system. A number of theorems are defined and proofed. It is shown that applications of qualitative, structural and mathematical analogies in analysis of fractional order signals appear in analogous mechanical, electrical and biological fractional order chains is very power, suitable an useful tools of mathematical phenomenology [1] to reduce research models to corresponding minimum, and, in same time, develop power of analysis use phenomenological mappings between local and global phenomena and properties. In a number of Tables, series of analogous signals with kinetic parameters of hybrid system dynamics are presented.
2* Phenomenological approximate mappings on nonlinear signal analysis in local area around of stationary points or states are presented with corresponding kinetic parameters in a number of Tables. For obtain approximate differential equations and approximate solutions in local area around singular points, linear and non-liner approximations are used. Method of local analysis based on phenomenological approximate mappings between local linear as well as nonlinear phenomena is power to obtain information of all nonlinear phenomena in the nonlinear dynamics of the system for completing elements for global analysis of the system nonlinear dynamics and stability and using different analogies, obtained result applied for analysis nonlinear dynamics in other physically disparate systems. These results are based on the previously punished Author's References in area of nonlinear dynamics [4,5].

Keywords: mathematical phenomenology; phenomenological approximate mappings; fractional orfer; nonlinear; signals; analogies; theorem.

Belgrade, 15 - 16th May, 2014

Abstract This distinguished scientific figure of exquisite creative energy and inspired enthusiasm, a scholar deeply attached to the Yugoslav and Serbian scientific and cultural heritage and an exquisite pedagogist of high ethic principles is in the living memory of many generations of students whom he taught how to learn and love mechanics, as a basic scientific branch of mechanical engineering either directly, through his lectures, or through his various and numerous textbooks and collections of problems which circulate in more than 140,000 copies. His disciples and colleagues are glad that he had the ability to transmit to them his great enthusiasm permeated with his sincere devotion for mechanics and his exquisite scientific sagacness.

Prof. Dr. Ing. Dipl. Math. Danilo P. RAŠKOVIĆ lectured mechanics, strainght of materials and oscillation theory at the faculties of mechanical engineering in Belgrade, Niš, Kragujevac, Novi Sad and Mostar, as well as in the Faculty of Science in Belgrade, Faculty of Philosophy in Novi Sad, Faculty of Electronics in Niš and at the Military-Technical College in Belgrade.

Professor RAŠKOVIĆ wrote a considerable number of university textbooks which ran through numerous editions. Some of them still hold records as for the number of editions and copies printed within the group they belong to. In addition, he wrote a series of textbooks in the field of mechanics for secondary technical schools, as well as a number of chapters in professional technical handbooks, mimeographed course materials and textbooks for post-secondary schools of mechanical engineering. He also wrote several textbooks for postgraduate studies.

We are of the opinion that this occasion should be used to say a few things about professor Rašković's four-year-long co-operation with the publishing house "Naučna knjiga" concerning the publication of his university textbooks, collections of problems and various other handbooks. Follows the review of university textbooks and handbooks written by professor Danilo Rašković and published by "Naučna knjiga" in total 120.000 examples:

* **MECHANICS I (STATICS)** - a 16,000-copy printing of first three editions; II edition 1949, III edition 1950; subsequent editions 1960 (a 3,000-copy); 1962, 1964, 1965, 1968, 1971, 1973, 1978 (a 3,000-4,000-copy)
* **MECHANICS II (KINEMATICS)** - first two editions in a 13,000-copy printing. Editions: 1947, 1950, 1958.
* **MECHANICS III (DYNAMICS)** - first two editions in 10,000 copies. Editions: 1947, 1956, 1962, 1973.
* **STRAINGHT OF MATERIALS** - editions: 1956, 1961, 1962, 1965, 1967, 1971, 1973, 1977, 1980, 1984 - approximately 25,000 copies.
* **OSCILLATION THEORY** - editions: 1957, 1965 - 6,000 copies.
* **TABLES OF STRAINGHT OF MATERIALS** - (ran through 13 editions) approximately 40,000 copies.
* **ESSENTIAL MATRIX CALCULUS** -1971 edition, 1,500 copies.
* **ELASTICITY THEORY** - 1985 edition, 2,000 copies.

andother.

Some of his university textbooks were published by other publishing houses such as "Zavod za izdavanje udžbenika", "Gradjevinska knjiga", "Tehnička knjiga".

Among the publications for postgraduate studies the following should be mentioned: **ANALYTICAL MECHANICS** and TENSOR CALCULUS, both edited by the Faculty of Mechanical Engineering in Kragujevac.

All contents of these pubications are material resources existing as scientific heritage in area of mechanics in Serbia and corresponding presentation in digital form is of great scientific interest and oppan possibilities to disseminate those fundamental books in area on theoretical and applied mechanics to new ganerations of students, researchers and engineers.

Dear Professor dr. Katica R. (Stevanovic) Hedrih,

On behalf of Tensor Society, we would like to invite you to "The 13th International Conference of Tensor Society on Differential Geometry and its Applications and Informatics Besides" with great pleasures. Furthermore, we suggest that you will give a plenary lecture (45~60 min.) entitled: "Generalized function of fractional order dissipation of system energy and extended Lagrange differential equation in matrix form (*Dedicated to 86th Anniversary of Radu Miron's Bi rth*)". It is very glad for us if you could inform your visiting and staying schedule and arrival date, its time at Iasi Station or airport at advance.

Looking forward to waiting concerning the above matter at your earliest convenience,

Sincerely yours.
T. Kawaguchi

INVITATION LETTER

It is our great pleasure to invite you to attend

THE 13th INTERNATIONAL CONFERENCE OF TENSOR SOCIETY ON DIFFERENTIAL GEOMETRY AND ITS APPLICATIONS, AND INFORMATICS BESIDES

that will be held from September 3rd (Tuesday) to September 7th (Saturday) 2013 at the Faculty of Mathematics of Alexandru Ioan Cuza University and the Mathematical Institute "O.Mayer" in Iaşi, Romania.

Given your contribution to the academic field, the Organizing Committee would be honored if you could participate and give a talk at this conference.

Please find details on the programme, lodging and travel information in the First and Second Announcements you have already received.

Hoping that your schedule will allow you to accept this invitation,

Sincerely yours,

On behalf of the Organizing Committee,

Prof. Dr. Henri Luchian
Vice-Rector for International Relations

Dear Prof. Dr. Katica Hedrih,

On behalf of the Organizing Committee of the 8th International Symposium on Classical and Celestial Mechanics (CCMECH'8) to be held in Siedlce, Poland from September 25 till 29, September 2013 we are glad to invite you to participate in the conference and to present your talk

"Fractional order differential equations of dynamics of two mass particles, constrained by a fractional order element",

Please note that the registration fee is 400 PLN. It covers organization expenses, conference materials and refreshment room at the Symposium. It can be paid on site upon arrival. Participants of the symposium CCMECH'8 will be accommodated at the hotel "Dwor Moscibrody" situated in the picturesque place near Siedlce (www.dwor.moscibrody.pl). Costs of accommodation and meal are covered by the participants of the symposium.

We kindly ask you to confirm your participation by September 10, 2013 via e-mail: alexander_prokopenya@sggw.pl and to let us know some details concerning your arrival and departure (number of train or flight, date and time).

We look forward to seeing you in Siedlce.

Best wishes,

12th CONFERENCE

Dynamical Systems - Theory and Applications

December 2-5, 2013. Lodz, POLAND.

November 27, 2013

Professor Katica R. Stevanovic Hedrih
Mathematical Institute SANU Belgrade
and Faculty of Mechanical Engineering
University of Niš
SERBIA

Invitation for publication in the DSTA 2013 Special Issue

Dear Professor Hedrih,

Your papers: "Vector analysis of kinetic parameters of mass particle separation dynamics from space discrete system" (MAT144), author: Katica R. Stevanovic Hedrih; "Two mass particle fractional order plane system dynamics" (OTH145), author: Katica R. Stevanovic Hedrih, have been provisionally scheduled to be considered for publication in some Special Issues of the *International Journal of Dynamics and Control* (IJDC); journal of *Nonlinear Dynamics and Systems Theory* (NDST), respectively.

Using the details provided in your personal profile at www.dys-ta.com, please take into account the attached journal guidelines and send the full-text papers not later than **January 15, 2014** (final deadline).

In order to distinguish these papers from the versions already published in a Conference Book please slightly modify their title, extend, make a citation of the corresponding DSTA Book, or write in "Acknowledgements" that the papers have been presented during 12th Conference on Dynamical Systems - Theory and Applications.

On behalf of Organizing Committee of the DSTA 2013 I wish you fruitful discussions and a successful participation in the conference.

Yours sincerely,

Jan Awrejcewicz
