BELGRADE SIGHTSEEING (GUIDED TOUR) Meeting point in front of
the Mathematical Institute SASA

The temple of Saint Sava is one of the most recognizable symbols of Belgrade.

This magnificent place is located in the center of the capital and daily gathers a large number of believers and interested tourists.

The history of this magnificent temple goes back far into our past. The place where it is believed that the Turks burned the relics of Saint Sava brought from Mileseva is today where a large temple was built in his honor and glory.

The Temple of Saint Sava, with its imposing size, is one of the largest temples in the world. It occupies an area of almost 5,000 square meters and reaches nearly 80 meters in height. Its dome is 39.5 meters in diameter. Particularly impressive is the mosaic inside the temple, which covers 15,000 square meters. The Church of St. Sava

can accommodate up to 10,000 believers.

The Museum of Nikola Tesla, one of the greatest scientists the world has had the opportunity

to see, is located in Belgrade, in Krunska Street. It is housed in a building erected in 1929, which today is one of the cultural monuments under state protection. The museum works on preserving and showing the life and work of Nikola Tesla through personal items that remained after his death.

After the death of Nikola Tesla in America, the things that remained behind him belonged to Sava Kosanovic, the son of Tesla's youngest sister. Through his efforts, those things were transferred to Serbia in 1951, after which they were handed over to the state as a gift. It was decided to use them for a museum, so in 1955 the

first technical museum in Serbia was opened, which was dedicated to Nikola Tesla. After Tesla's urn was transferred to Belgrade in 1957, it was also placed in a museum, which completed the museum collection. A large number of personal items of Nikola Tesla and his urn are kept in the museum, but also a rich archive material consisting of his writings, documents, drafts, ideas, letters, as well as his urn. The permanent exhibition is located on the ground floor of the building and is divided into two parts. The first concerns the life of Nikola Tesla, while the second part presents his inventions and working models. The archive material consists of:

Over 160,000 original documents

Over 2000 books and magazines

Over 1500 photos and glass photo plates

Over 1000 plans and drawings

Program includes: - Walking tour with a professional guide, tickets for entrance

Rate per person: Eur 18 (application on questionnaire form)

Remarks: Minimum participants 10
